The NFX Master Method

The next example is from last week
& is using Quad & double signals on
the 1h charts.

Quad Shooting Star on the 1h a strong signal but normally counter trend so looking for smaller targets, 1:1 or support.

The Shooting stars all paid down to rising support with an average of 40 pip gain per pair.

EU & EJ formed Hammers on support so that is the perfect Double play. GU & AU formed Quads at support a little later.

Set ups on the daily time frame.

A Day trading EU 9th Jan 2012

It's easy to point out the trades on a chart at the end of the, so here are the trades taken as they happened.

EU 6am Breakout 1h

Direction for morning session set, price bounced on 3618 fib & Bullish Double Divergence formed, price then broke sinking resistance.

3 Sisters confirmation

The other 2pairs confirm the Bullish bias.

GU 1h Bounce on support after Double Bull Divergence & sinking res breakout

AU 4H Bounce on support

8.20am 5 Minute entry. Standard 1:2 risk reward trade.

Triple Play signal at 38 fib, previous 1h Candle a Triple Bull

Green arrow is the Triple signal, purple line entry, red line stop, green lines targets 1 & 2.

Target 2 hit.

Risk -10 Target +20. Price now at Fib level so possible correction.

4 pairs at fib levels, so we need a pullback to buy again.

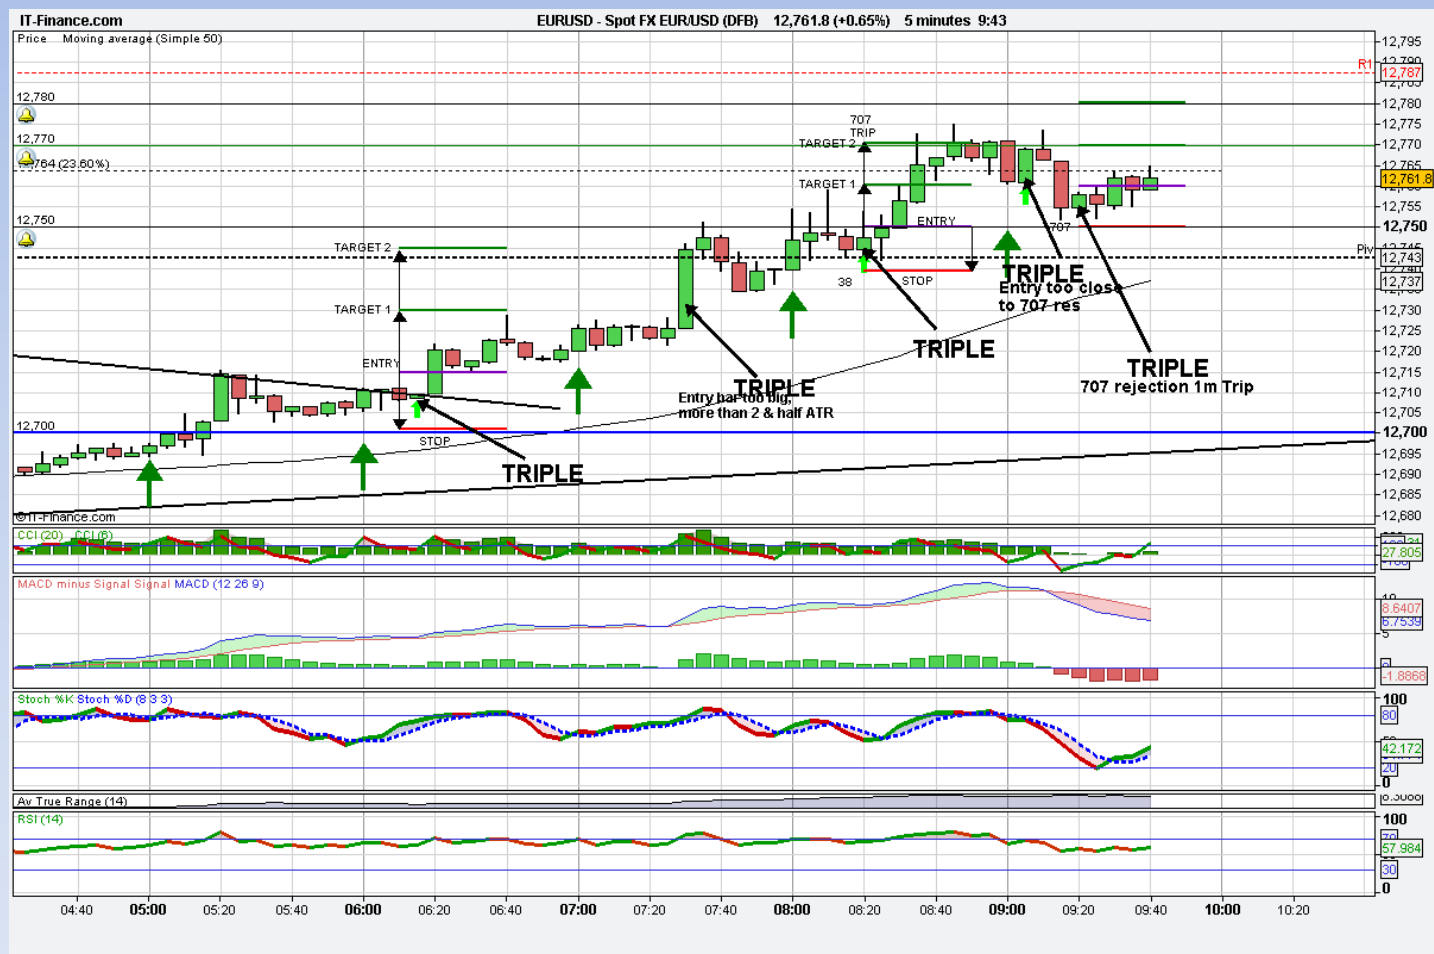

Next long after the pullback

9.20am Candle Triple at 707 fib 1m & Hidden Double Divergence on 5m. 1:2 RR trade.

Trade is about to make the move, notice the Double Bull Hidden Divergence.

Target 1 +10

Stop moved to -5

Triple but no entry because of the 786 Fib & MACD divergence (not Double but a good warning) so possible correction.

AU at 707 & EJ at 618 & MACD Bearish divergence on the 3 Sisters, so no long entries here.

MT4 confirmation.

Hanging Man Triple at 786.

Cautious longs after a correction, or bias change to Bear to look for shorts.

Drop from the 786 Triple.

There was a trade at the break of rising support at the 10.45 Triple but we didn't take it.

Price made lower high at our target 1

So Triple Bear had us tighten stop to -5 and closed at +5 after the Trip Bear.... Stop & reverse trade. Entry was Triple at sinking resistance.

Triple long signal near support.

This was confirmed by the 707 fib rejection on the 1m confirmed with Double Divergence on 1m.

There was another Triple short signal while the short trade was developing but we didn't add to position as price was just above Pivot.

Target 2 hit.

There was another Triple signal during the trade but we didn't add to position this time due the sinking resistance, however there is an option to add to positions on further Triple signals with your trade if price is not too close to S & R etc. Price now at 707 so possible correction.

Target 1 hit

Price now at 1:1 target but at rising support, so half position removed & stop tightened.

Triple Bull formed at the support

so the remaining half of the short position was closed at +10 & a long taken above the signal.

Price not moving as expected & previous 1h Candle was Triple Bear so stop tightened up to -10 under rising support.

Stopped out for -10 & that's me done for the day.

Tuesday 10th Jan 2012

Morning bias set to Bear as price broke rising support & the other 2 pairs confirmed.

Triple signal short after Double Bear divergence, 1:2 RR.

Target 2 hit

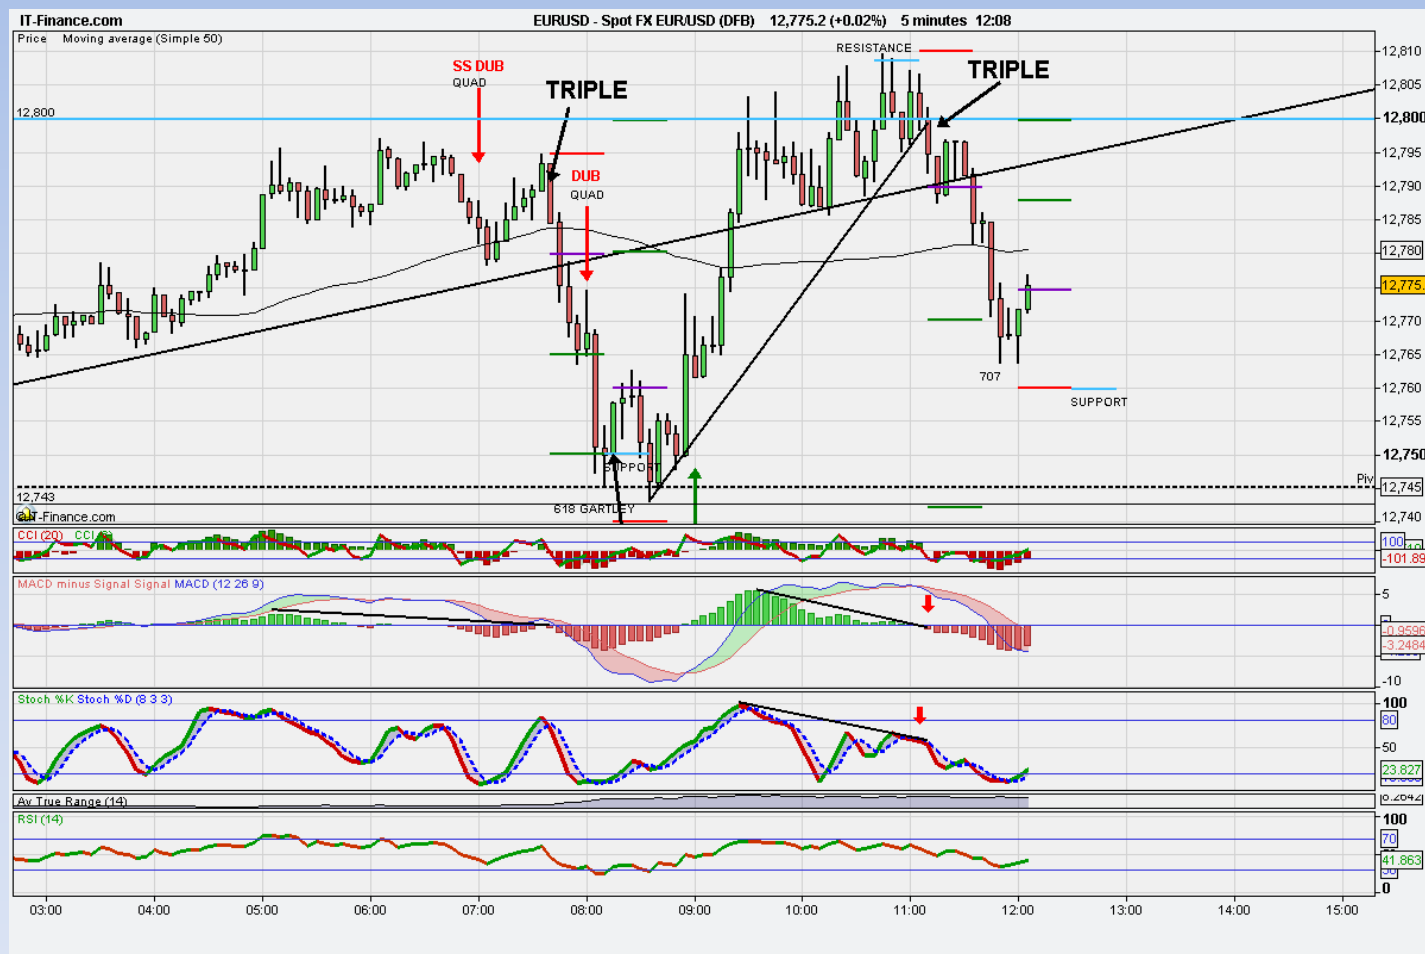

Price hit support, pivot & 618 Gartley formed all confirmed with Triple Fib rejections on AU & GU at the same time.

1:2 target hit

Price hit target 1 so stop moved to -5 but then hit support, also at 707 Fib confirmed by AU & GU. Short closed at this point for +15 & long taken above the Triple Play 5m candle.

Target1 hit & stop moved to -5

Target 2 hit & that was me done for he day. Price reversed at this point & there were 3 more trades that could have been taken but I had finished for the day.

Wednesdays Trades

IT-Finance.com

EURUSD - Spot FX EURUSD (DFB) 12,826.8 (+0.82%) 5 minutes 20:44

Last Friday, a VERY strong set up formed in the morning on the 1h charts all 4 pairs.... EU had formed a Harami Cross (One of the strongest reversal signals in my opinion in an uptrend) with Double Bear divergence & the other 3 pairs were all forming Bearish set ups; EJ Double Bear Divergence, AU a 786 Gartley & GU had rejected the 61 & also formed Double Bear divergence. It doesn't get to look much better than this! Looking for shorts with legs.

Price collapsed all day for some very nice pips. A Quad Hammer formed that signalled the end of the drop & Au had formed a Gartley & rejected a 618 fib with Double Bull Div but as it was so late on Friday, no long position was taken.

A trade from this morning.
